very high satisfaction over existing curriculum as it addresses the issues like gender, environment, sustainability, human values and professional ethics. Majority of the students expressed satisfaction over the functioning of department and general library and they felt comfortable with reference access but some students suggested big difficulty in accessing the syllabus based books as it is not often available. They also opined that syllabus should include post-modern changes happening in the subject. Some students argued for bringing case studying method of academic curriculum and required more interactive session with hands on training.
